

## Heat Exchangers

Rimara Thermal manufacture a range of high temperature heat exchangers. We specialize in recovering energy from waste gas streams such as oxidisers and high temperature furnaces.

Our specially designed heat exchangers are built to withstand the high stresses experienced during operation.

### Key features:

Fully welded tube seals- thus no cross contamination.

High grade stainless steel construction.

Internally lagged – low thermal losses.

Expansion compensator built into the tube plate – low thermal stress.

Temperatures up to 800 deg C.

In house design and manufacture.

Simulation models available for all our heat exchangers.
